

Hand control Heidelberg RS

Your dealer:

Hand control Heidelberg RS

„Remarkable intuitive“ are the best words to describe this manual control. After a short acclimatisation the hand control Heidelberg RS is handled exactly. By the ergonomic use of the gravitation the arm does not get tired at long drives.

The pleasantly unobtrusive design of this hand control fits in nearly every vehicle interior. The hand control is delivered with a leathern handle and a real leather panel.

The hand control Heidelberg RS can be mounted in order to save space in the middle console.

For more than 100 vehicle models installation kids are available.

Other advantages of the hand control Heidelberg RS are:

- an easy installation and removal
- no change of the vehicle disguise
- easy removal of the vehicle

In case of a vehicle changing, the hand control can be used further on. Merely the specific installation kid for the new vehicle must be purchased.

Required space:

The hand control Heidelberg RS can be mounted in order to save space without change of the vehicle disguise in the middle console.

Functional principle:

Braking occurs through pushing in the direction of the dashboard. By pressing down the hand control gas accelerate. A blocking gear for locking the brake at a traffic light stop or at the change of the driving step can be simply operated.
